**Prototype**

As soon as user downloads the application, this is the first page they are going to see.
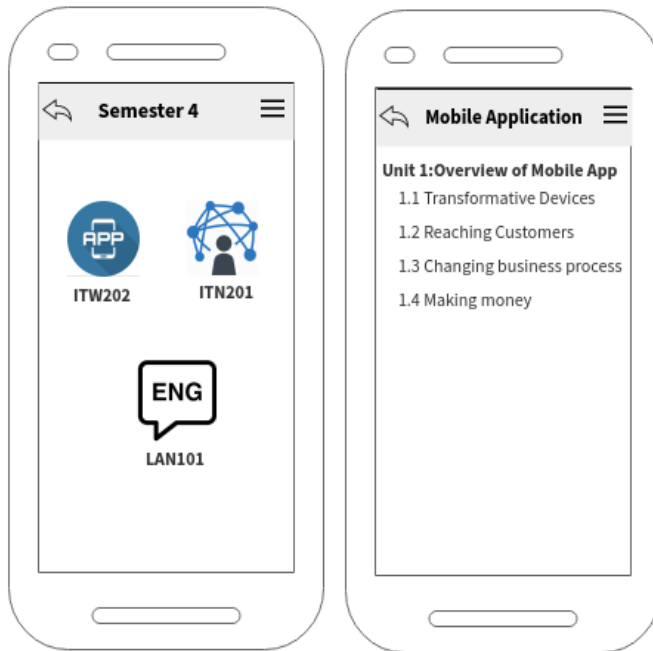

There are four areas where they can explore namely:

1. **Notes**
2. **Papers(Question papers)**
3. **Projects**
4. **Practical's (Lab works)**

In case they want to refer notes and when they click on notes, this page will appear. It is divided into semester for your convenience.

You can just click on accordingly.

Semester 4

ITW202 ITN201

LAN101

Mobile Application

Unit 1:Overview of Mobile App
  1.1 Transformative Devices
  1.2 Reaching Customers
  1.3 Changing business process
  1.4 Making money

Suppose you are in fourth semester, then when you click on fourth semester, it will display the courses available in fourth semester.
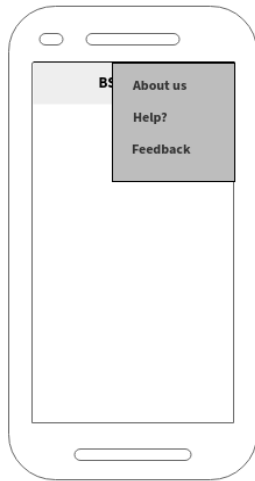

And when you click on ITW202 that is mobile application, notes would be available and there would also be books related to the course for extra references.

Projects

Web Development Research

Mobile Application

Practicals

Python
Java
HTML
C Programming
ADS

As of **Project and Practical's,** when you click on it**,** all the project that is being done in different fields (research as well) will be shown there.
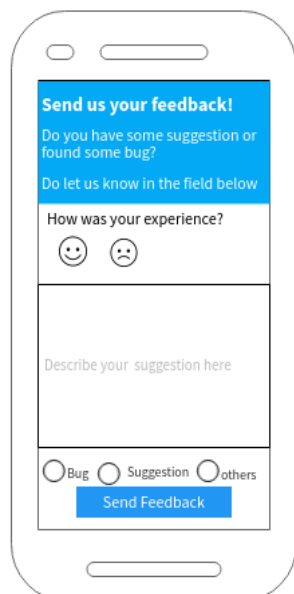

And it will be same for the **Practical's.** The different courses where lab works are done are being reflected there.

As of **Papers** , it will be same like **Notes(**divided In semester wise) but you have to select a year and when you click on year, the list of semesters will be displayed.

This is what it is going to display when you click on the hamburger menu.

1. About us: It will display the information about the app
2. Help: in case there is something that you are not clear about this application, you can always click on this help feature.
3. Feedback: if there is something user is not satisfied or want some improvement, they can always give feedback.

If the user wants to send some feedback , then the user can click on feedback and this page will appear, he/she can type his suggestion.
